

# X5c GIF Schedule 2002

DRAFT v1 011024

Proposal by H. Reithler,  
based on today's meeting

Notes:

- 1- To avoid collisions, some requested periods are as parasitic running
- 2- Not shown: parasitic aging tests running as far as possible the whole year
- 3- Assuming that non-availability of muon beam caused by e-beam in X5b matches holes here
- 4- CMS-ECAL main user runs shown are with e-beam; some muons are still present
- 5- Further CMS-ECAL 48h irradi. (source only) to run parasitically about once per 2 weeks
- 6- Further mutual parasitic running, as far as needed, to be discussed around March 2002.
